

Comparison Report Overview (video)

Article Number

000089123

Information

Comparison Reports allow you to compare and combine like-questions across multiple surveys in order to compare the means using a one-sided t-test. It can be valuable to compare means to track changes in responses over time (longitudinal analysis), between interventions (pre/post tests), or aggregating data to get a general sense of how students are responding across contexts (e.g., using question bank questions in a variety of surveys across programs and departments).

The following video walks through the entirety of the process. For step-by-step instructions on how to create Comparison Report Views by clicking [here](#).

We also recommend [reading this article](#) for guidance on understanding the Comparison Reports results.

If you have any questions about this process, please feel free to contact Campus Labs Support by calling 716-270-0000, or emailing support@campuslabs.com.
