Information

Release Overview

We are excited to share the below highlight for the Anthology Finance & HCM 26.0.1 release. Your feedback is invaluable as we build solutions to serve you.

Anthology continues to improve performance and reliability in the product as described in the Resolutions section of the release notes, as applicable.

Release Highlight

The application has been updated to comply with Microsoft's new requirement in Dynamics 365 service update 10.0.47, which now executes integrations within an updated run-time that enforces stricter validation of .NET assemblies. As part of this enforcement, all assemblies executed must be strongly named. Integration components within Anthology Finance, HCM & Payroll have been updated and redeployed to meet this requirement, and Microsoft has been engaged to delay further upgrades to minimize customer impact.
